

B17  
found on the unfiltered coffee. On the other hand, approximately 80% less lipids were found on [the] coffee which was filtered by one layer of the paper filter 30, while approximately 95% of the lipids were removed from the coffee when two layers of the paper filter 30 were used. Negligible quantities of fine particulate coffee grounds were noted at the bottom of the cup when either one or two layers of filter paper were used compared to none. These observations are in agreement with other studies performed, such as those referred to above in the articles of Urgert, et al. and Van Desselorp, et al.

Please amend the paragraph beginning at column 4, line 38, as follows:

B18  
The foregoing detailed description is for clearness of understanding only, and no unnecessary limitations should be understood therefrom, as [the invention] modifications will be obvious to those skilled in the art.

In the Claims:

Please amend claim 1 as follows:

B19  
1. (Amended) A filtering device for an espresso-type coffee maker of the type having a spout to deliver heated water under high pressure to finely ground coffee beans to brew coffee therefrom, and a receptacle to receive brewed filtered coffee, means defining a flow path between said finely ground beans to said receptacle, comprising:

a [metallic] permanent filter in said path of heated coffee passing to the receptacle which filter has openings sized to filter out the fine espresso coffee grounds; and

at least one layer of filter paper in the path of the heated coffee passing to the receptacle.

Please amend claim 4 as follows:

B20  
4. (Amended) In an espresso-type coffee maker of the type that delivers heated water under [3 to 15 bars of] elevated pressure to a pan in which finely ground coffee beans are present and from which brewed coffee is removed through a permanent filter, the improvement of a disposable paper filter across the flow path of the brewed coffee, said paper

filter being of a thickness and size so as to effectively remove and trap lipids and fine grounds from the brewed coffee and to reduce the lipids in the brewed coffee [by at least 50%] and wherein said paper filter is sized and shaped to fit over and adjacent the top of said permanent filter between said permanent filter and said finely ground coffee and said finely ground coffee is positioned above and on said paper filter so that the paper filter also serves to aid in removing, in a single operation, the used grounds as well as the paper filter from the coffee maker.

[Please amend claim 5 as follows:]

5. (Amended) The [invention] improvement of claim 4 wherein the paper filter is of such a thickness and size so as to effectively remove and trap lipids and fine particulate grounds from the brewed coffee so as to remove approximately 95% of the lipids that would be present absent the paper filter.

620  
[Please amend claim 6 as follows:]

6. (Amended) The [invention] improvement of claim 4 wherein said filter paper is made up of at least two layers of standard thickness coffee filter paper.

[Please amend claim 7 as follows:]

7. (Amended) [The] A method of making lower lipids containing brewed coffee liquid in an espresso-type coffee maker of the type that makes coffee liquid by passing heated water under elevated pressure [of 3 to 15 bars] through finely ground coffee beans held above a permanent filter comprising the steps of placing disposable paper coffee filter material, of the type that may absorb lipids, and of a size and shape to cover the permanent filter in the maker atop and covering the permanent filter, placing the finely ground coffee beans atop said paper coffee filter material and passing heated water at [a pressure of 3 to 15 bars] an elevated pressure through, sequentially, the coffee beans, [and through] said paper filter material, and said permanent filter to create brewed coffee liquid and to allow lipids therefrom to be absorbed by said paper filter material so as to make lower lipid containing coffee liquid.

Please add claim 8 as follows:

8. The device of claim 1, wherein the permanent filter comprises a metallic filter.

Please add claim 9 as follows:

9. The improvement of claim 4, wherein the heated water is under a pressure of at least 3 bar.

Please add claim 10 as follows:

10. The improvement of claim 4, wherein the heated water is under a pressure of from 3 to 15 bar.

Please add claim 11 as follows:

11. The improvement of claim 4, wherein the paper filter is of such a thickness and size so as to effectively remove and trap lipids and fine particulate grounds from the brewed coffee so as to remove at least 50% of the lipids that would be present absent the paper filter.

Please add claim 12 as follows:

12. The improvement of claim 4, wherein the finely ground coffee has grounds of 0.3 mm or less in particle size.

Please add claim 13 as follows:

13. The method of claim 7, wherein the heated water is under a pressure of at least 3 bar.

Please add claim 14 as follows:

14. The method of claim 7, wherein the heated water is under a pressure of from 3 to 15 bar.

Please add claim 15 as follows:

13

15. The method of claim 7, wherein the paper filter is of such a thickness and size so as to effectively remove and trap lipids and fine particulate grounds from the brewed coffee so as to remove at least 50% of the lipids that would be present absent the paper filter.

Please add claim 16 as follows:

14

16. The method of claim 7, wherein the finely ground coffee has grounds of 0.3 mm or less in particle size.

Please add claim 17 as follows:

Sub 7

621

17. A method of making lower lipids containing brewed coffee liquid in an espresso-type coffee maker of the type having a spout to deliver heated water under elevated pressure to finely ground coffee beans to brew coffee therefrom and a receptacle to receive brewed coffee and having a flow path defined between said finely ground beans to the receptacle including a permanent filter in the flow path, comprising:  
placing at least one layer of filter paper in the flow path; and  
passing heated water at an elevated pressure sequentially through the finely ground coffee beans, the at least one layer of filter paper, and the permanent filter to the receptacle.

Please add claim 18 as follows:

15  
18. The method of claim 17, wherein the permanent filter comprises a metallic filter.

Please add claim 19 as follows:

Sub 7

19. The method of claim 17, wherein the filter paper comprises a plurality of layers.

Please add claim 20 as follows:

*end 7*  
20. The method of claim 19, wherein the filter paper layers are crimped together to form an easily handled unit.

Please add claim 21 as follows:

*19* 21. A filter for use in an espresso-type coffee maker of the type that delivers heated water under elevated pressure to a pan in which finely ground coffee beans are present and from which brewed coffee is removed through a permanent filter, the filter comprising:  
a layer of paper filter material of a size and shape to fit over and adjacent a top of the permanent filter between the permanent filter and the finely ground coffee beans, the paper filter material having a thickness to effectively remove and trap lipids and fine grounds from the brewed coffee and to reduce the trapped lipids in the brewed coffee.

*B21*  
Please add claim 22 as follows:

22. The filter of claim 21, wherein the heated water is under a pressure of at least 3 bar.

Please add claim 23 as follows:

*19*  
*20* 23. The filter of claim 21, wherein the heated water is under a pressure of from 3 to 15 bar.

Please add claim 24 as follows:

*19*  
24. The filter of claim 21, wherein the paper filter material is of such a thickness and size so as to effectively remove and trap lipids and fine particulate grounds from the brewed coffee so as to remove at least 50% of the lipids that would be present absent the paper filter.

Please add claim 25 as follows:

*19*  
25. The filter of claim 21, wherein the paper filter material is of such a thickness and size so as to effectively remove and trap lipids and fine particulate grounds from the brewed

coffee so as to remove approximately 95% of the lipids that would be present absent the paper filter.

Please add claim 26 as follows:

<sup>19</sup>  
23 26. The filter of claim ~~21~~ further comprising a second layer of paper material.

Please add claim 27 as follows:

B21  
<sup>19</sup>  
24 27. The filter of claim ~~21~~, wherein the shape of the paper filter material is approximately circular.

Please add claim 28 as follows:

<sup>24</sup>  
25 28. The filter of claim ~~27~~, wherein the circular paper filter material has a diameter of approximately 5 centimeters.
